

Open Source Systems Administration

Elizabeth K. Joseph
@pleia2

HP
OpenStack Infrastructure Team

Ada Lovelace Day at ThoughtWorks, 15 October 2014

A faint, semi-transparent watermark of a red metal chain and a large padlock is visible in the background of the slide.

The OpenStack Infrastructure team maintains the servers OpenStack developers use worldwide to contribute to OpenStack

Our Infrastructure is also an Open Source project

- All code repositories are available online:
 - <https://git.openstack.org/cgit/openstack-infra>
- All system documentation too:
 - <http://ci.openstack.org/>
- Changes can be proposed by anyone through a public code review system (Gerrit):
 - <https://review.openstack.org/>
- Other projects and companies use our code.

Submitting changes? git-review and Gerrit

We use a lot of git, but we submit changes to code review:

```
elizabeth@r2d2$:/~git/openstack-infra/publications$ vim index.html
elizabeth@r2d2$:/~git/openstack-infra/publications$ git commit -a
[toolsconfigs/updates 0c63f4a] Update tools and review purposes.
 1 file changed, 4 insertions(+)
elizabeth@r2d2$:/~git/openstack-infra/publications$ git review
Amending the commit to add a gerrit change id.

Commit Message [Permalink](#)

Update tools and review purposes.

We've begun using bashate and beaker tests on some of our projects, adding those. Also note that we use the review system for translations imports and specifications.

Challenges

Security

This week, POODLE! <https://review.openstack.org/#c/128707/>

And more generally, the whole world knows what we run and how we run it

We need to fully trust *some* people

Some shell access is still required
(viewing logs, migrations, unusual service failures)

Private management of sensitive data
(keys, passwords)

Core reviewers have the power to push anything that passes tests through
